                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                B
cytckines (TRANCE). Human or murine TRANCE polypeptides or their variants, fragments, derivatives or analogues may be used as modulators of immune response in a mammal comprising, antisense sequences to TRANCE and fusion proteins comprising human and/or murine TRANCE. Agonists and antagonists of TRANCE, can be used to modulate immune response by increasing or decreasing the life span of mature dendritic cells and increasing or decreasing T cell activation. These techniques are especially useful for treating immune system related conditions such as HIV, cancer, autoimmune disease or hypersensitivity to an allergen. The TRANCE polypeptides can be used to increase the viability of dendritic cells in vivo or in vitro, especially when used in conjunction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       11-DEC-1998;

Osteoclasts promote dissolution of the bone matrix and solubilisation of bone salts. The present sequence is useful in gene therapy, and as hybridisation probes or primers. ODF protein is useful for modulating the activity of cells, e.g., cell proliferation, cell differentiation and cell viability, as immunogens to generate anti-rat ODF antibodies, and as vaccines. Anti-rat ODF antibodies are useful in assay methods for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                quantifying ODF polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 957 BP; 230 A; 260 C; 256 G; 211 T; 0 other;
